

## **JAVA Arrays and String Test**

1. Write a program to copy the elements of one array into another array
2. Write a program to array elements print all Even number
3. Write a program to array elements print all Odd number
4. Write a program to search an element in an array
5. Write a program to array elements to print sum of Negative Numbers
6. Write a program to Print Unique Elements in Array
7. Write a program to array elements print all Positive number
8. Write a program to calculate the average value of array elements
9. Write a program in to find the sum of all elements of the array
10. Write a program to merge two arrays elements to store third array
11. Write a program to get the canonical representation of the string object
12. Write a program to check whether a given string ends with the contents of another string
13. Write a program to check whether two String objects contain the same data
14. Write a program to count a number of Unicode code points in the specified text range of a String
15. Write a program to compare a given string to the specified character sequence
16. Write a program to concatenate Two strings
17. Write a program to Count Number of Uppercase and Lowercase letters
18. Write a program to create a character array containing the contents of a string
19. Write a program to find maximum between two string
20. Write a program to create a new string repeating every character twice of a given string
